

Jeebly — APK Build & Direct Download Guide

Option A: GitHub Actions (Automated APK on Every Push)

1. Create `.github/workflows/build_apk.yml`

```
name: Build Jeebly APK

on:
  push:
    branches: [main]
    workflow_dispatch: # Allow manual trigger

jobs:
  build:
    runs-on: ubuntu-latest

    steps:
      - name: Checkout code
        uses: actions/checkout@v3

      - name: Setup Java
        uses: actions/setup-java@v3
        with:
          java-version: '17'
          distribution: 'temurin'

      - name: Setup Flutter
        uses: subosito/flutter-action@v2
        with:
          flutter-version: '3.19.0'
          channel: 'stable'

      - name: Install dependencies
        run: flutter pub get

      - name: Build APK
        run: flutter build apk --release --split-per-abi

      - name: Upload APK artifact
        uses: actions/upload-artifact@v3
```

```
with:
  name: jeebly-release-apk
  path: build/app/outputs/flutter-apk/app-arm64-v8a-release.apk
  retention-days: 7
```

2. Push to GitHub → Go to Actions tab → Download APK artifact

Direct download from: https://github.com/YOUR_ORG/jeebly/actions

Option B: Firebase App Distribution (Recommended for Team Testing)

Step 1: Install Firebase CLI

```
npm install -g firebase-tools
firebase login
```

Step 2: Build the APK locally

```
flutter build apk --release
# Output: build/app/outputs/flutter-apk/app-release.apk
```

Step 3: Upload to Firebase App Distribution

```
firebase appdistribution:distribute build/app/outputs/flutter-apk/app-release.apk
--app YOUR_FIREBASE_APP_ID \
--release-notes "Jeebly v1.0 - Registration + Admin Panel" \
--testers "your@email.com,tester2@email.com"
```

Testers receive an email → click link → install directly on Android.

Getting your Firebase App ID:

1. Go to Firebase Console → Project Settings
 2. Under "Your apps" → Android app
 3. Copy the **App ID** (format: 1:123456789:android:abcdef)
-

Option C: Build Locally Right Now

Prerequisites

```
# Install Flutter (if not already)
# https://docs.flutter.dev/get-started/install

# Verify setup
flutter doctor

# Install dependencies
flutter pub get
```

Build release APK

```
# Standard release APK (one file, ~20MB)
flutter build apk --release

# Or split by architecture (smaller files)
flutter build apk --release --split-per-abi
```

APK location

```
build/app/outputs/flutter-apk/
├─ app-release.apk           ← Universal (send this)
├─ app-arm64-v8a-release.apk ← Modern phones (smallest)
├─ app-armeabi-v7a-release.apk ← Older phones
└─ app-x86_64-release.apk    ← Emulators
```

Transfer to phone

```
# Via ADB (USB cable)
adb install build/app/outputs/flutter-apk/app-release.apk

# Or upload to Google Drive / WhatsApp / Telegram and open on phone
```

Signing for Release (Required for Play Store)

Generate keystore

```
keytool -genkey -v \  
  -keystore jeebly-release.jks \  
  -keyalg RSA \  
  -keysize 2048 \  
  -validity 10000 \  
  -alias jeebly
```

android/key.properties

```
storePassword=YOUR_STORE_PASSWORD  
keyPassword=YOUR_KEY_PASSWORD  
keyAlias=jeebly  
storeFile=../../jeebly-release.jks
```

android/app/build.gradle — add signing config

```
def keystoreProperties = new Properties()  
def keystorePropertiesFile = rootProject.file('key.properties')  
if (keystorePropertiesFile.exists()) {  
    keystoreProperties.load(new FileInputStream(keystorePropertiesFile))  
}  
  
android {  
    signingConfigs {  
        release {  
            keyAlias keystoreProperties['keyAlias']  
            keyPassword keystoreProperties['keyPassword']  
            storeFile keystoreProperties['storeFile'] ? file(keystoreProperties['  
                storePassword keystoreProperties['storePassword']  
            ]  
        }  
    }  
    buildTypes {  
        release {  
            signingConfig signingConfigs.release  
        }  
    }  
}
```

Required pubspec.yaml Dependencies

```
dependencies:
  flutter:
    sdk: flutter
  firebase_core: ^2.27.0
  firebase_auth: ^4.17.0
  cloud_firestore: ^4.15.0
  firebase_storage: ^11.6.0
  firebase_messaging: ^14.7.0      # FCM notifications
  google_maps_flutter: ^2.6.0     # Maps
  image_picker: ^1.0.7            # Photo upload
  intl_phone_number_input: ^0.7.3+1 # Phone OTP input
  flutter_localizations:          # i18n
    sdk: flutter
  intl: ^0.19.0

dev_dependencies:
  flutter_test:
    sdk: flutter
  flutter_lints: ^3.0.0
```

5-Language Setup (l10n)

pubspec.yaml

```
flutter:
  generate: true

flutter_localizations:
  sdk: flutter
```

l10n.yaml

```
arb-dir: lib/l10n
template-arb-file: app_en.arb
output-localization-file: app_localizations.dart
```

Locale files to create:

- lib/l10n/app_en.arb — English
- lib/l10n/app_ar.arb — Arabic (RTL)

- `lib/l10n/app_fr.arb` — French
- `lib/l10n/app_wol.arb` — Wolof
- `lib/l10n/app_pul.arb` — Pulaar/Fula

`main.dart` — RTL/LTR support

```
MaterialApp(  
  localizationsDelegates: AppLocalizations.localizationsDelegates,  
  supportedLocales: const [  
    Locale('en'),  
    Locale('ar'), // RTL  
    Locale('fr'),  
    Locale('wo'), // Wolof  
    Locale('ff'), // Fulah/Pulaar  
  ],  
  // Auto-detects RTL for Arabic  
)
```
